

Interactive Digital Art and Design SE608

Project Proposal Year IV

Student Name:	Aleksandra Skarzycka	Student Number:	C00294397
Working Title:	Environmental Showcase		
Description:	Creating an environmental rendered showcase and using a Particle/Visual Effects Editor to bring life to the atmosphere, giving certain aspects their needed particles or visual effects. I'm aiming to make it an outdoor campsite type of setting, with an active fire lit so I could mess with the fire effects and any lighting the fire would emit and effect the surrounding area. My goal is to make it as detailed as my skills will let me. Possible addition of organic models with an idle animation for a livelier scene in the showcase. Would like to focus on using the Blender software mainly but will also likely experiment with Maya.		
Reasons for selecting project:	I want to dive deeper into building 3D environments as it has been something I've always wanted to learn how to do and get better at, so I think this would be great for me to work on as I'd be actively learning in classes as well, with access to online tutorials or any guides made by the platforms I'd be using, in this case Blender. I may also experiment in Maya as well, but I would like to focus on Blender.
